Drawing tabs and panels are special windows which can be used for setting drawing or drawing properties, respectively. There are drawing tabs which are windows accessible through the Windows menu with special drawing related settings. The most important of these are the paper tab which allows switching between papers and the media tab which allows selection of drawings placed on a media. Also, there are panels which are like folders on the drawing windows. They contain a group of drawing related settings. The drawing windows use objects which are composed of other objects, called basepoints. The basepoints are arranged according to their purpose in a hierarchy tree. They are numbered according to their purpose. For example, a basepoint with the number 11 is referred to as 'top' and a basepoint with the number 12 is referred to as 'bottom'. These terms can be used in the drawing windows to refer to the corresponding basepoints. The drawing windows also use basepoint groups which are divided in the same manner as the basepoint hierarchy. With the help of the basepoints and basepoint groups, the drawing windows can be arranged in a way that they suit the users purpose. When the users need more drawing space, they can be arranged to work on the paper with the help of basepoints with the number 12. The basepoints can be dragged and moved around the drawing area in a way that they match the users needs. The basepoint groups can also be rearranged to get the users' desired order. These are especially helpful when the basepoints are placed in the wrong order. Other drawing windows are the palette windows, title windows and the workspace windows. Palette windows Palette windows are windows for placing objects and text on the drawing. The objects can be placed and edited in the palette window. They are arranged in the same manner as the basepoints in the drawing area. They can be viewed by the user as buttons in the application bar in the drawing area. The palette windows contain basepoints, basepoint groups and text objects. The palette windows contain objects such as 'objects', 'guides', 'palette tabs', 'grids', 'grid objects' and 'arrows'. These objects can be placed on the drawing area and edited. Title windows Title windows are windows which display a list of objects or basepoints and basepoint groups on the a1d647c40b
