I want to be able to add custom controls such as buttons and sliders to a form in order to manage my files. I want to use these controls to manage text files as well as images and video. I want to be able to use the Text properties of the controls to set the name of a file. I want to be able to click a button on the form to open a file to read and also save a file. I want to set the filetype to either txt, jpg, or gif. I want the button to open the file from the folder where the project is stored as well as any subfolders. I want the user to be able to select which file to open as well as select the filetype to open the file in. I want to know what file type should be associated with each file type to open the file in. I want to be able to change the file type on the button. The files that I save should have a file extension associated with it. I want the file type of the file to be stored in the project file. I want to be able to open the file to be edited and save the file after editing the file. I want to be able to add a browse button to the form in order to navigate to the folder and select a file to open and edit. I want to add a text box to be able to set the name of the file to be saved. I want to be able to set the filetype to either txt, jpg, or gif. I want to be able to set the location for where the file will be saved and set the file type of the file that will be saved. I want to set the Text property of the save button to the file name in the text box and set the filetype for the file to be saved to the file type the file has. I want to use the Properties of the
