Gematsu: “If I were to describe the game, it would be the MMO experience of the Final Fantasy series.”

GameSpot: “If you’ve ever played any kind of RPG, you know all the staples of the genre by now.” As one of the first magazines to review the game, Gematsu set the tone for the numerous buzz and criticism that would build around the game. The review also brought attention to the unique online element. According to the headline, “Dungeon Explorer” - an online element in which you can drop at any time in the future - was an “elegant idea,” an element that has since been carried over to the latest installments of the Final Fantasy series. As a review from a consumer site, Gematsu’s review did go into some depth regarding the game’s gameplay and the differences from the popular MMORPG genre. According to a detailed review, the unique action RPG elements of the game are strong enough to differentiate it from a standard MMORPG genre, as well as the Final Fantasy franchise. **GameSpot (6/10): “While the combat is flashy and flavorful, it’s also so hard to control that it can be completely disappointing.” Gematsu (7.5/10): “No matter how much you customize your character, you’re still stuck with a simple job system in which you either fight monsters with your weapon or craft magical items.”** In GameSpot’s final review score, they acknowledge the

action RPG elements, but focus on the fact that while the combat is flashy, it's also difficult to control. With a score of 6/10 out of 10, GameSpot finished by offering suggestions to how to improve the game. RPGFan (4/5): "It's a trifle dense and awkward at times, but thankfully your job system gives you a good excuse to experiment with skills and abilities while you're exploring on your way to the dungeon." While GameSpot's final review score of 6/10 was relatively low, RPGFan's final review score of 4.5/5 was generally positive. In the description, RPGFan noted the need to form an impression of the game based on the action RPG elements that differentiate the game from other RPG games. The idea

To determine the effect of heparin on the antigenicity of cholera toxin (CT), guinea pigs were immunized with purified CT in the presence of various amounts of heparin to compare the antigenicity of native and heparin-treated toxin. When heparin was added to the CT (10(6) LD50/ml), the active principles of heparin (12 kDa fraction) and heparin-like polysaccharides [low-, medium-, and high-molecular-weight heparin, dermatan sulfate, heparin di-sulfate, or chondroitin sulfate B (CS B)] inhibited the appearance of anti-CT antibodies.
