AutoCAD is designed to be a "universal CAD" and is used in a wide range of industries including, architecture, manufacturing, engineering, construction, interior design, and many more. Why is AutoCAD used? The vast majority of AutoCAD customers use it for commercial purposes, such as architectural, mechanical, and electrical design. AutoCAD is also widely used in other industries, such as engineering, architecture, construction, interior design, and many more. The architecture industry, in particular, uses AutoCAD due to its price and ability to model building and building projects quickly and accurately. The 3D architectural visualizations, in particular, are a key feature of AutoCAD, making it a great tool for Architecture. How does AutoCAD work? AutoCAD is a type of Computer Aided Design (CAD) software. It is a computer-aided design and drafting software used for the preparation of blueprints, floor plans, and sketches of buildings and other structures. A drawing can be composed of standard planar shapes, textured or modeled surfaces, or more complex geometric shapes or mathematical functions such as splines. A geometric object, be it an arch, circle, curve, curve, surface, or a combination, can be constructed and manipulated to achieve a desired result. AutoCAD is unique in that it creates 3D objects. The user draws 2D or 3D objects, such as a face, line, or a 3D model, and then a corresponding text or drawing is created by the CAD program. Comparison of AutoCAD versions Unlike previous AutoCAD versions, AutoCAD R2014 was a completely new product and as such, the first edition of AutoCAD was not compared to any previous releases. The only previous version listed was AutoCAD R2007, which was a 64-bit application compatible with Microsoft Windows XP and later. AutoCAD has two distinct code bases, which were merged to form AutoCAD R2014: AutoCAD LT AutoCAD Architecture (not to be confused with AutoCAD Architecture 2012) AutoCAD LT has been the mainstay of the desktop AutoCAD product for many years. The R2014 release brings a number of new features, such as the ability to load from DWG files and to export directly to DWG files. The service is easy enough to write it in c# but when I try to replicate the functionality in VB.NET I cannot find a way of returning a list of JSON objects. Here is the code I have in c#: public List GetAllComments() { List comments = new List(); comments = new List(); comments.Add(new comments { id = 1, productID = 1, categoryID = 4, comment = "LOL thats funny", time = DateTime.Now }); comments.Add(new comments { id = 2, productID = ca3bfb1094
